

# Melco Fast Clamp

Melco Fast Clamp is the answer for hard-to-hoop items. Adjust the arms for height and width, slip the product to be embroidered over the lower arms, clamp down, and go!

Ideal for shoes, shirt and trouser pockets, shirt collars, hats, car carpets, pet collars, leashes, bag straps, flip flops, purses, saddle pads, backpacks, pockets, tote bags, soft-side coolers, and more.

# Features

## Flexibility - Embroider anything

- Adjustable width, easily move arms in or out to fit the product.
- Adjustable arm height to fit materials of varying thickness.
- Three sets of clamp arms: Short, Medium, Long - easily adjusted to the product.
- Enables embroidery on products with a narrow or small sew field, such as shoes, dog leashes, collars, bag straps, flip flops, small pockets, etc.
- Instead of being limited on all four sides by a frame, the MFC only limits to the left and right - allowing for a much larger sewing field on the Y-axis, especially on small items.

## Efficiency - Save cost and time

- Easy to install and use - works with hoop limits in Melco OS.
- Eliminates hooping on many products.
- Saves time - thanks to its ease-of-use.
- Simple, all-in-one system which allows embroidery on a huge variety of items - previously only possible with many different hooping systems costing a few thousand dollars.

## Quality - No flagging, easier positioning and better tension

- Unlike with traditional hooping systems, the material you embroider is always directly on the needle plate. This means you don't have any flagging, increasing stitch quality.
- Easier positioning - clamp one side, then adjust the position before clamping the other side.
- Better tension on the material - because the clamps can be closed individually, the material can be tensioned perfectly after clamping it on one side and before closing the other. This, together with the strong hold of the clamps, makes for a much better tension - improving stitch quality.

## Melco Fast Clamp Specs

|                                 |  |
|---------------------------------|--|
| Max. Sewing Field Y-Axis        | 182mm  |
| Max. Sewing Field X-Axis        | 230mm  |
| Selectable X-Positions for Arms | 30 / 40 / 50 / 70 / 90 / 110 / 170 and 230 mm  |
| Optimized for                   | Melco AMAYA XT, AMAYA XTS, EMT16 and EMT16plus |
| Material                        | High quality aircraft aluminum                 |
